

Do Tien Tri

DevOps Engineer Intern

Ho Chi Minh , Viet Nam | Phone : (+84) 934884181 | [Gmail](#) | [GitHub](#) | [Linkedin](#)

SUMMARY

DevOps Intern with hands-on experience building CI/CD pipelines, containerized applications, infrastructure monitoring, and cloud deployments using Docker, Kubernetes, Jenkins, Terraform, and Microsoft Azure.

EDUCATION

Ho Chi Minh City University of Natural Resources and Environment (HCMUNRE) 2023 - 2027

Bachelor of Engineering in Information Technology | 2023 – 2027 (Expected)

PROJECT EXPERIENCE

Infrastructure Monitoring & CI/CD Platform | [Demo](#) | [Source Code](#)

Summary: Automated monitoring and CI/CD platform deployed on Microsoft Azure Virtual Machine for a Django/PostgreSQL application.

- Built an observability platform using **Prometheus, Grafana, Node Exporter, and PostgreSQL Exporter** to collect and visualize **20+ infrastructure and database metrics**.
- Created **3 Grafana dashboards** covering **Linux infrastructure, Django backend performance**, and **PostgreSQL/PostGIS database monitoring**.
- Built a **4-stage Jenkins CI/CD pipeline** consisting of **Build → Transfer → Approval → Deploy**, automating Docker image creation, secure artifact transfer, manual production approval, and deployment to an Azure VM.
- Automated deployment of **Docker Compose** services and executed **Django database migrations** after each successful release.
- Configured **9 Prometheus alert rules** integrated with **Alertmanager and Telegram notifications** to detect infrastructure, application, and database incidents including high CPU usage, memory pressure, low disk space, instance downtime, HTTP 5xx errors, high latency, PostgreSQL downtime, and excessive database connections.
- Implemented end-to-end monitoring for **Django applications, Linux infrastructure, and PostgreSQL/PostGIS databases** using Prometheus exporters and custom metrics.

Kubernetes Voting App CI/CD Deployment | [Demo](#) | [Source Code](#)

Summary: Containerized microservices application deployed on a K3s Kubernetes cluster with automated CI/CD and centralized monitoring.

- Deployed a **5-service microservices application** on **K3s Kubernetes**, including **Vote, Result, Worker, Redis**, and **PostgreSQL** services.
- Built a **5-stage Jenkins CI/CD pipeline** consisting of **Checkout → Docker Login → Build → Push → Deploy**, automating source retrieval, Docker image creation, Docker Hub publishing, and Kubernetes deployment.
- Built and pushed **3 application images (vote, result, and worker)** to Docker Hub using commit-based image tags.
- Automated Kubernetes deployment using kubectl, including namespace creation, secret management, image updates, and rollout verification.
- Configured **Deployments, Services, and Traefik Ingress** to provide reliable service discovery and external application access.
- Implemented centralized monitoring with **Prometheus, Grafana, and Loki**, and created **4 Grafana dashboards** covering Kubernetes cluster health, Voting App analytics, PostgreSQL, and Redis monitoring.
- Monitored **6 Prometheus scrape endpoints** across Kubernetes workloads and cluster services to provide real-time operational visibility.
- Troubleshoot networking, Ingress routing, and Kubernetes Service connectivity issues to improve application availability and cluster stability.

SKILLS

- **Operating Systems:** Linux (Ubuntu)
- **Containers & Orchestration:** Docker, Kubernetes (K3s)
- **CI/CD & Automation:** Jenkins
- **Cloud & Infrastructure as Code:** Microsoft Azure, Terraform
- **Monitoring & Logging:** Prometheus, Grafana, Alertmanager, Loki
- **Version Control:** Git, GitHub
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, Ingress
- **Programming Languages:** Python, Bash
- **Databases:** PostgreSQL, Redis
